

Homeadapt stairlifts

For your independence

Homeadapt Stairlifts

The ideal stairlifts if you are looking for quality and durability.

Installing a stairlift is going to help you retain access to the upstairs of your home. You will once again be able to enjoy the freedom that you had before the stairs became a challenge.

We offer two stairlifts for straight staircases and one which can travel around corners. The stairlifts can be fitted on either side of the stairs. The lift track is fixed to the steps of the stairs, not the wall. All models deliver a comfortable, smooth and quiet ride.

When you have chosen your Homeadapt stairlift, your stairlift representative will measure your staircase, provide you with a price quote and order your stairlift when you are ready. The installation is quick; between one hour and half a day, depending on the complexity of your staircase. Homeadapt stairlift dealers are fully trained to install and service your stairlift, and you can with confidence turn to them with questions and concerns.

The Homeadapt range; the Elan and the Elite Straight for straight staircases and the Elite Curve for stairs with one or more bends.

A middle-aged man with grey hair and a friendly smile is seated on a white stairlift. He is wearing a dark blue long-sleeved shirt, light-colored trousers, and brown leather shoes. He is holding a book in his lap. The stairlift is positioned on a staircase with a dark, patterned carpet. A wooden handrail is visible on the left side of the stairs. The background is a plain, light-colored wall.

“ My day is so much easier and more enjoyable since I got my stairlift. It feels like I have taken back my freedom and it feels wonderful.

The foot plate and the carriage safety sensors stop the lift if an obstacle is in the way.

With the remote controls you can call or send the lift by pressing a button.

Safety Should anything get in the way of the stairlift as you are operating it, there are safety sensors on the foot plate and the carriage that will immediately stop the lift. A dual braking system makes our stairlifts among the safest in the world. The electromagnetic braking system is complemented by a self-locking gear box and overspeed brake which completely ensure your safety. The Homeadapt stairlifts are equipped with an offset swivel function which allows the seat to turn fully, leaving no gap between seat and landing. This enables the user to alight safely with both feet firmly on the floor.

Operation All our stairlifts are fitted with a directional control switch in the armrest of your choice. This rocker switch is pressed in the direction of travel to operate the lift. A toggle switch is available as an option.

Battery powered Homeadapt stairlifts use two 12-volt batteries that are powered by a charger that plugs into any household outlet. The stairlift batteries will be charged when the stairlift is in a parked position. You have access to upstairs and downstairs in your home, even when the electrical service is interrupted.

Compact There is a common rail for the two straight rail stairlifts. The exceptionally slim, anodized aluminium, upright rail is installed close to the wall. After use the seat, armrests and footrest are easily folded up into a position where they remain out of the way, allowing passage to family and friends using the stairs.

Wireless Two wireless remote controls can be used to send or call the stairlift by pressing a button.

Folding rail option If there is a doorway at the bottom of your staircase that would be obstructed by the rail you can opt for a hinged rail section at the bottom that can be folded up and out of the way, either manually or automatically. Should a curved rail intrude across a doorway at the bottom of the stairs, instead of using a hinged rail, the stairlift is parked around the corner, away from the stairs.

The Elan offers exceptional quality at a budget price with many useful features such as the ability to park and charge the stairlift anywhere along the rail, and a very compact folded width.

The Elan

A high performance yet affordable stairlift.

Compact The design of the Elan stairlift is very space efficient, leaving plenty of room to walk on the stairs. The slim rail can be installed as close as 127 mm from the wall and with the armrests, seat and footrest folded the Elan takes up only 305 mm.

Generous and adjustable The 509 mm wide seat of the Elan stairlift is among the more generous on the market today. The seat height is adjustable to suit the individual user. The weight capacity is 136 kg.

Rail profile The Homeadapt straight rail profile is the least intrusive in the market. Our philosophy is that the rail should have a modest impact on the home. The result is a unique and attractive design.

Powered options Your existing Elan stairlift can, at any time, be upgraded with three powered options, powered swivel action, powered folding footrest and powered folding rail. Whether you need it right now or may need it in the future; an upgrade does not require that you replace your carriage as is the case with many other stairlifts.

Parking and charging With its continuous charge strip along the entire rail, the batteries of the Elan can charge regardless of where the lift is parked. By using the remote control the stairlift can be parked anywhere on the rail; removing potential obstruction from the hallway and leaving the lift out of sight.

Installation The simplicity in design makes the Elan easy and quick to install.

The Elite seat swivels at the top and bottom of the stairs.

The Elite Straight

A superior stairlift with a luxurious seat, a slimline rail and a unique weight capacity of 190 kg.

Superior comfort The seat of the luxurious Elite-series is not only the most comfortable seat you will ever find on a stairlift. It also features a manual swivel function at both the top and bottom landing. The seat height, space between the armrest and height of the footrest are adjustable to suit the individual user. For your comfort there is also a soft-start, soft-stop feature.

Superior capacity One of the features that makes the Elite stairlift stand out among the competitors is its unique weight capacity of 190 kilos (30 stone). This stairlift is built to be the ultimate in durability and reliability.

Multitude of options The Elite provides many options to choose from to ensure that your individual needs are met. The seat swivel can be manual or powered, as can a fold-up rail if one is required. The footrest is either folded manually, or raised by folding the seat base or pressing a button on the armrest. There is a choice of rocker- or toggle switch and there is even an extra large seat available.

Rail profile The Homeadapt straight rail profile is the least intrusive in the market. Our philosophy is that the rail should have a modest impact on the home. The result is a unique and attractive design in anodized aluminium.

Charging along the rail With continuous charge strips along the rail the stairlift can be parked anywhere to charge the batteries.

The Elite Curve custom made rail follows the wall closely.

The Elite Curve can, with optional top over-run, be parked around the corner to leave the staircase clear.

“ I decided to have a stairlift installed when I could no longer climb the stairs. It proved to be one of the best decisions I have ever made.

The Elite Curve

Supreme comfort, unparalleled ride quality and a unique weight capacity of 190 kg for staircases where one or several bends are required.

Custom design The Elite Curve is custom made to suit your staircase. The design allows the stairlift to be fitted to either side of the stairs. The bend radius is tight, which means that the rail follows the wall closely even in the turns. The seat is the same exceptionally comfortable seat that can be found on the Elite straight rail lift.

Ride quality Rails for curved stairs are installed in sections that must join together as smoothly as possible to promote good ride quality. Instead of using pre-fabricated rail sections which usually produce rough joints and a jolty ride, we have elected to have the Elite Curve rail forged by experienced craftsmen to produce a seamless ride with a remarkable stability over any staircase configuration.

Options An additional charge point, a power swivel and a powered foot-plate can all be added to tailor the lift to your specific requirements, along with a wider seat for additional comfort.

Stairlift features
